SUMMARY

Aspiring Data Science and AI Engineer with hands-on experience in Python, SQL, machine learning, data analysis, and LLM-based applications. Skilled in developing end-to-end data and AI solutions, including RAG systems, API-driven applications, data preprocessing, exploratory analysis, and predictive modeling. Strong foundation in statistics and machine learning with a focus on building practical, scalable solutions that transform data into meaningful insights and intelligent applications

TECHNICAL SKILLS

Programming Languages: Python, SQL, C, C++

Machine Learning and AI: PyTorch, Scikit-learn, Supervised Learning, Unsupervised Learning, Deep Learning, Classification, Feature Engineering, Model Evaluation

Generative AI and NLP: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangGraph, Sentence Transformers, Semantic Embeddings, Semantic Search, Vector Databases (ChromaDB), Groq API, OpenAI-compatible APIs, Intent Classification, Speech-to-Text, OCR

Data Analysis and Visualization: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Data Preprocessing, Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis

Cloud Platforms: Amazon Web Services (AWS) – Fundamentals, Microsoft Azure – Fundamentals

Developer Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code

PROJECTS

Customer Support RAG System *Python, FastAPI, LangGraph, ChromaDB, Sentence Transformers, PyMuPDF*

- Built a Retrieval-Augmented Generation (RAG) customer support system that ingests PDF and TXT knowledge bases and retrieves top-5 relevant chunks through semantic embeddings stored in a ChromaDB vector database.
- Implemented intent classification and query routing with LangGraph, directing policy questions and general questions to separate response paths.
- Generated context-grounded answers using LLM inference via the Groq API and exposed the complete pipeline as a FastAPI REST API for downstream application integration.
- Parsed and chunked source documents with PyMuPDF and encoded them with Sentence Transformers to enable semantic search across the knowledge base.

Smart Mock Interview Platform *React, Flask, Python, LLM API, PyPDF, Whisper Model*

- Developed a full-stack AI mock interview platform that parses candidate resumes with PyPDF and generates role-specific 10 technical interview questions through an LLM API.
- Engineered configurable job roles and difficulty levels that dynamically control generated question sets, built on a React frontend and Flask backend.
- Integrated MediaRecorder speech-to-text capture with LLM-based evaluation scoring technical accuracy, communication, and relevance, then produced automated reports detailing scores, strengths, weaknesses, and personalized improvement recommendations.

IPL Win Prediction System *Python, Pandas, NumPy, Scikit-learn, Plotly, Machine Learning*

- Built supervised machine learning classification models to predict IPL match outcomes from trained on 1000+ matches across 17 seasons.
- Performed data cleaning, feature engineering, and exploratory data analysis (EDA) with Pandas and NumPy to produce model-ready datasets.
- Compared multiple classification models using accuracy, precision, recall, and F1-score to select the strongest performer, and communicated prediction behavior through interactive Plotly visualizations.

iPhone AI Product and Note Helper Shortcuts *iOS Shortcuts, REST APIs, JSON, OCR, LLM APIs*

- Built iOS Shortcuts automations that analyze food and cosmetic products from barcodes and images by chaining REST API calls with LLM inference.
- Integrated barcode lookup APIs and OCR to extract product attributes, then applied LLMs to generate concise product insights in structured JSON.
- Created an AI Note Helper that automates text extraction and organization from images, reducing manual data entry time by over 75% for users.

EDUCATION

Bachelor of Technology in Information Technology

Vidya Jyothi Institute of Technology, Hyderabad, India

2022 – 2026

CGPA: 8.3

CERTIFICATIONS

- Python Professional Certification
